Our program is heavily weighted toward reproductive surgery, with advanced laparoscopic surgery for endometriosis, myomectomy, ovarian cystectomy and adhesiolysis. In addition, supracervical or total hysterectomies are performed when childbearing is not desired.

We operate 2 full days per week, from 7:30 am to 4:30 pm every Tuesday and Friday.

We do not perform pelvic reconstructive surgery and very little vaginal surgery.

We perform lots of operative hysteroscopy, for metroplasty, myomectomy and adhesiolysis.

Our operative laparoscopy includes reconstructive surgery with extensive experience in laparoscopic suturing for tubal reanastomosis, uterine reconstruction post myomectomy.

We are involved in adhesion prevention clinical trials.

**Preferred length of visit: 1-2 days, weeks or months**
