Mary Gordinier, M.D.; GYN Oncology, Louisville Oncology
Michael Heit, M.D.; Urogynecology, Urogynecology Specialists of Kentuckiana
Dwight Pridham, M.D.; REI, Associates in OB-Gyn

2-Year Fellowship Program

Program Description: The fellowship in Gynecologic Endoscopy at the University of Louisville is a two-year academic program. The program incorporates the fellows in both university and private settings where they are involved in direct patient care, resident teaching, and research. The goal is to develop individuals who are not only well trained clinically and academically, but who also can assume prominent positions in endoscopic surgery in university programs, private settings, and national organizations. The fellows will have a broad experience in laparoscopic, hysteroscopic and robotic surgery, including gynecologic oncology, urogynecology and pelvic reconstruction, general surgery, and colorectal surgery.

The fellows will actively participate in the university-based private practices and foundation clinics which emphasize the management of abnormal bleeding, endometriosis, pelvic and adnexal masses, and pelvic pain. The fellows also rotate with very active private practices in operative endoscopy. In addition, the fellows have the opportunity to enhance their gynecologic ultrasound skills with one-on-one instruction with the faculty.

The fellows are designated Instructors in the department and serve as attendings with periodic service and call responsibilities. They share call and consult responsibilities for the Endoscopy Section of the department. They supervise resident clinics on a periodic basis. Fellows attend and work in the cadaver laboratory on a regular basis, learning and teaching pelvic anatomy and various surgical techniques. This experience is an outstanding and unique opportunity. The fellows also assist with the surgical skills laboratory for resident training, developing teaching modules and skill enhancement. Fellows participate in post-graduate courses in anatomy and advanced endoscopy

held at the University of Louisville. During their first year, the fellow will attend a biostatistics course that is taught at the University of Louisville. Alternatively, the fellow has the option of completing a two-year Masters of Public Health degree.

The fellows are required to present at one Grand Rounds each year. Fellows will develop advanced presentation skills in Power Point and video production, with the anticipation of submitting videos for competition at major meetings. During the fellowship, the fellow will be expected to complete an independent research project. The design and results are presented at our annual research day. We anticipate the research will be published in a peer-reviewed journal at the culmination of their fellowship.
